BENS CarbonCopy Filter

The BENS CarbonCopy filter enables the multifarious and flexible copying of print documents. Single pages of a print job can be copied (electronic copy) as well as entire print jobs. The filter can be configured in such a way that each copy can be treated differently – for example for copy number one the paper from tray "A" can be used and then stapled whereas for copy number two the paper from tray "B" is used and not stapled. Many further combination variations are possible this way.

A free of charge configurator makes it easier for the user to define his workflow.

The BENS CarbonCopy filter can process PCL5 as well as PCL6 print data. In combination with the macro filter, the CarbonCopy filter can be used to create sophisticated workflows with company logos, footers, GTCs in multiple copies from various paper trays, stapled according to the settings made or otherwise post-processed.
