BENS CleverPrint Filter

The BENS CleverPrint filter was developed to encourage economic printing. The filter supports three saving options: double-sided printing (duplex), black and white printing and toner saving printing (Eco Modus). These 3 options can be combined in any way possible and saved in a configuration. When printing, the filter forces the desired saving measures regardless the driver settings made by the user. This way it can be prevented that documents (e.g. E-mails, document drafts, etc.) are printed the expensive way: single-sided and in colour. Instead, the documents are printed in duplex and black and white: resource and cost-saving.
