

BENS IPDS/AFP PRINTING

The IPDS/AFP printing module is an AFP/IPDS emulation for PCL laser printers and MFPs that ensures an excellent compatibility to IBM systems. With the PDS/AFP printing module, your PCL printer can receive IBM IPDS data streams directly from an AS/400-iSeries, a mainframe or an AIX system. Also printing via emulations like PRes® is supported.

Key Features:

Native IPDS emulation.

IBM emulations: 3812 (240DPI), 4028(300DPI), InfoPrint XX (auto resolution).

Support of edge-to-edge applications.

Black&White and color printing supported.

Duplex Printing support.

Alternate Stacker Offset support.

Tray-Mapping support.

Unterstützung von Druckbildversatz.

Print Image Offset support.

Each BENS Server includes a demo version for IPDS/AFPDS printing.
